DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/1/09 has been entered.

Response to Amendment

2. The amendments to the claims, in the submission dated 12/1/09, are acknowledged and accepted.

Election/Restrictions

3. Claims 1-11 are allowable. The restriction requirement between Species A and B, as set forth in the Office action mailed on 10/20/08, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claim 4, directed to Species B, is no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present

application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

4. Claims 1-11 are allowed.
5. Claim 1 is allowable over the prior art of record for at least the reason that although the prior art discloses: a frequency beam splitter for use in the frequency basis, to receive input photons and produce output photons separated in frequency space, the frequency beamsplitter comprising: an asymmetric two-path interferometer, reversible down to the quantum limit, arranged with a first partially transmitting mirror to split input photons into first and second paths, a time delay element to introduce a differential time delay into the second path, and a second partially transmitting mirror to mix the two paths again to form two outputs, the prior art fails to teach or reasonably suggest, that the two outputs deliver photons at different frequencies separated in the frequency space by a radio or microwave frequency determined by the time delay.
6. Claims 2-11 are dependent on claim 1 and are allowable for at least the same reasons claim 1 is allowable.
